

A photograph showing two individuals walking across a large, white, textured expanse of ice. The ice is partially submerged in dark blue water, creating a sharp contrast. One person is in the foreground, wearing a yellow jacket and black pants, while the other is further back in a red jacket and black pants. They are both using trekking poles.

Group Strategy

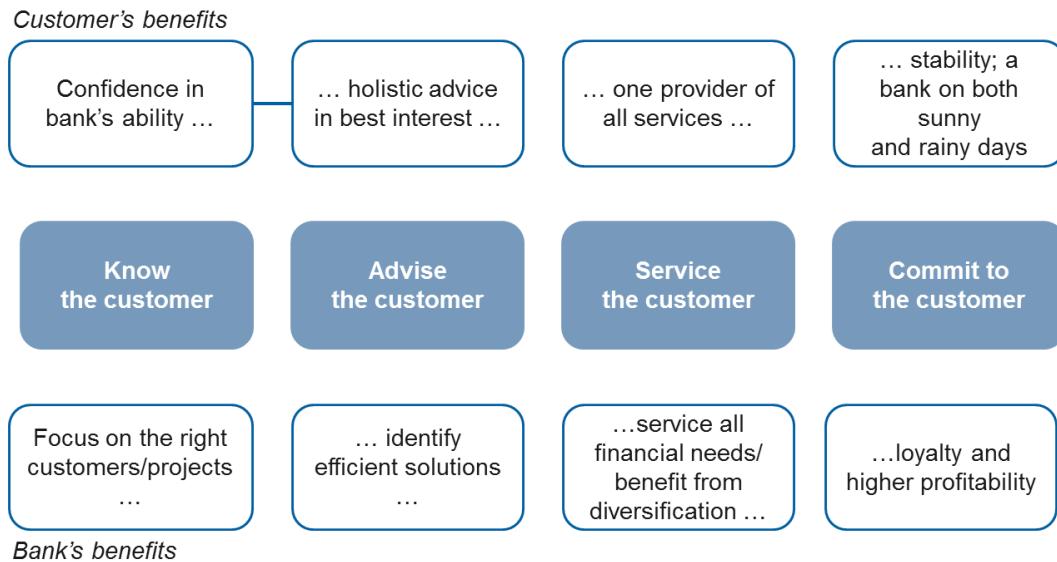

Nordea is shaping the future relationship bank

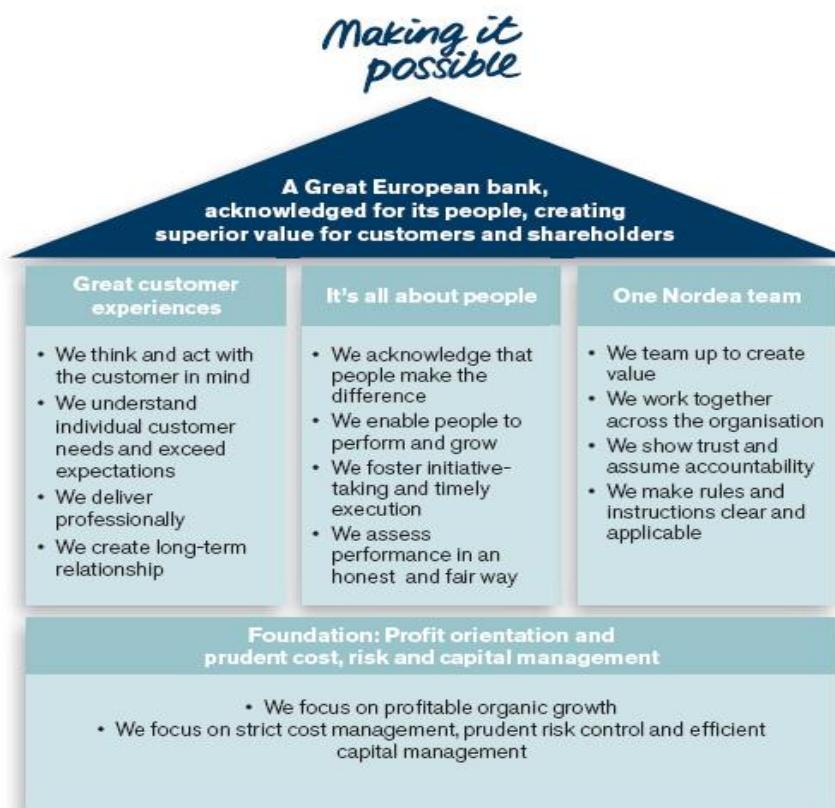

The relationship strategy continues to be instrumental to Nordea

- Since 2007, Nordea has consistently pursued its relationship strategy
- With the 2015 plan, taking Nordea forward towards the future relationship bank business model, the relationship strategy continues to be instrumental
- At the heart of this strategy is Nordea's ambition to understand, advise, service and commit to its customers for the benefit of building long term core relationships
- The relationship strategy has proven superior for working with customers in the New Normal as we build close knowledge of each customer's situation and needs
- In a macro environment which remains challenging, Nordea stays committed to servicing customers supporting the real economy

The relationship strategy: a superior model for working together with customers in the new environment

- The Market Consistent Embedded Value model (MCEV) is a stochastic dividend stream model projecting future developments based on Monte Carlo simulations. The model calculates the dividend stream to the shareholders in each scenario and derives the Economic Value as the net present value of the dividend stream for the specific scenario
- The market consistency is obtained using risk free interest rates (government curves) and state price deflators for discounting. The input for the stochastic scenarios is based on historical observations of financial market data
- The specific embedded value for the individual scenario is calculated on the basis of the current balance sheet, actuarial data and experience data for lapse rates, mortality rates etc.

During 2012 Nordea Life & Pensions has increased the MCEV by EUR 1,048m compared to year-end 2011. The key drivers are:

- New Business:** A positive new business inflow with an MCEV of EUR 173m
- Financial effects:** In general the interest rates have decreased during 2012 for all five countries. The financial effect captures the impact of having a lower interest level as at Q4 2012 versus Q4 2011 resulting in a reduction in the MCEV of EUR -373m. Denmark is most impacted due to the business composition
- Balance sheet development ('Other'):** Following the decreased interest rates the value of the assets, including bonds, has increased substantially. For the Danish business this resulted in an MCEV impact of EUR 367m
- Financial buffer ('Other'):** The financial buffer has increased by 2.4%-points to 7.5% during 2012 resulting in an increase in the MCEV of EUR 320m. Approximately 60% comes from the Danish business and is partially due to the introduction of a new Danish FSA discount curve in June 2012. Another key driver is an increase in the Finnish buffer due to positive investment returns
- Income statement ('Other'):** Positive period earnings compared to expected earnings of EUR 217m
- Regulatory Changes ('Other'):** Last year's legislation change in Poland reduced contributions, fees and introduced further restrictions on transfers for the PTE/OFE. These restrictions have now been analysed and the new experience data has been reflected in the surrender assumptions having a positive MCEV effect of EUR 103m. A new tax regime in Norway was introduced in December 2012 effective from the fiscal year 2012. A corporate tax rate of 20% has been implemented resulting in a negative impact on the MCEV of EUR -106m

MCEV - Value of In-Force business (VIF)

During 2012 the value of Nordea Life & Pensions's In-Force business has increased by EUR 738m compared to year-end 2011. The key drivers are:

- Value of new business sale of EUR 173m, especially in the Market Return products
- Increased financial buffer (from 5.1% to 7.5%) where the majority is within the Danish and Finnish businesses
- Positive balance sheet development, particularly in Denmark, covering for the contractual guarantees
- Financial effects contribute negatively to the Value of In-Force business

Risk	3	2	4	14%	15%	18%

- The margin for Traditional and Market Return products is calculated on the basis of annual premium equivalent (APE) standard (10 years)
- The value of new business within the Traditional portfolio has increased compared to Q2 2012 due to a combination of acquisition of corporate customers in Norway and lower running costs within the Danish and Norwegian businesses
- The value of new business within the Market Return products has increased approximately 200% compared to Q2 2012 as a consequence of strong sales within the Danish and Finnish Unit-linked businesses. The margins have remained stable during 2012
- The value of new business and the margin for Risk products are calculated on a one-year horizon (annual margin) given the duration of the products
