## 1. Introduction

The purpose of this documentation is to define how information in payment Messages should be structured for the exchange between the Message sender and Nordea.

The terms and definitions used in this document are defined in a separate document, "Glossary for Corporate eGateway", which can be found on the Nordea Group's homepage: [www.nordea.com/eGateway](http://www.nordea.com/eGateway).

This Message Implementation Guide complies with the international definitions for content and use of an ISO20022 pain.001.001.03 Customer Credit Transfer Initiation and Common Global Implementation (CGI) Credit Transfer Initiation recommendations.

The files sent to Nordea must be in UTF-8 format, using only the characters included in ISO-8859-1.

This MIG does not include any technical issues such as security, retransmissions, or duplicates.

For more information about Payment types, please read the document "Payment Types Nordea.doc" Additional information about account number structure, and usage, can be found in the document "Accounts in Nordea.doc" Both documents can be found at Nordea eGateway web page.

Further information about ISO 20022 definitions in pain.001.001.03 can be found in document "Payments - Maintenance\_2009 - Message Definition Report.pdf" at [www.nordea.com](http://www.nordea.com).

Link: [Payments\\_Maintenance\\_2009.pdf](#)

**Please note**, that Nordea do not accept LineBreak (CR LF) inside text elements. If LineBreak is included the file will fail in the processing, and pain.002 will not be reported.

## 2. Scope

The CustomerCreditTransferInitiation message is sent by the initiating party to the forwarding agent or debtor's agent. It is used to request movement of funds from debtor's account to a creditor.
