Table 2 - EU OV1 – Overview of total risk exposure amounts

The table provides an overview of total REA in Q2 2026 where credit risk accounted for the largest risk type with approximately 90% of Pillar I REA. Operational risk accounted for the second largest risk type. Total REA increased by EUR 0.1bn during the period, mainly driven by changes in asset quality in the retail portfolio.

The table provides a comprehensive overview of the use of credit risk mitigation techniques, according to Advanced IRB approach and Foundation IRB approach, broken down by exposure class along with the impact on credit risk mitigation methods in the calculation of RWEAs. Advanced IRB REA decreased by EUR 0.4bn compared to Q4 2025, mainly driven by a reduction in retail risk weights following the annual probability of default (PD) calibration of the retail models.

Table 15 - EU CQ1 - Credit quality of forborne exposures

Forbearance is eased terms or restructuring due to the borrower experiencing or about to experience financial difficulties. The intention of granting forbearance for a limited time period is to help the customer return to a sustainable financial situation ensuring full repayment of the outstanding debt. Examples of forbearance are changes in amortisation profile, repayment schedule, customer margin as well as easing of covenants. Forbearance is undertaken on a selective and individual basis and is followed by impairment testing. At the end of Q2 2026, total forborne loans and advances amounted to EUR 20m. Non-performing forborne loans and advances were EUR 4m and performing forborne loans and advances amounted to EUR 16m.

Table 19 - EU LIQ1 - Quantitative information of LCR

Nordea Kredit Realkreditaktieselskab's short term liquidity risk exposure measured by Liquidity Coverage Ratio (LCR) has remained on stable level during Q2 2026. Average LCR increased 59pp between Q2 2026 and Q1 2026. Main drivers of Nordea Kredit Realkreditaktieselskab's LCR results are high quality liquid assets, which counterbalance outflows from wholesale funding and mortgage loan promises. In Q2 2026 there was increase both in the average liquid assets and average net cash outflows, resulting to a higher average LCR ratio. Liquidity buffer in Nordea Kredit Realkreditaktieselskab is composed mainly of central government and high quality covered bonds and cash with central banks. Nordea Kredit Realkreditaktieselskab's main funding source in Q2 2026 was issued covered bonds. Nordea has a centralised liquidity management function where Group Treasury is responsible for the management of the Nordea Kredit Realkreditaktieselskab's liquidity positions, liquidity buffers, external and internal funding, and Funds Transfer Pricing. In terms of liquidity regulation, Nordea Kredit Realkreditaktieselskab does not have other significant currencies than DKK. Possible mismatches from minor exposures in foreign currencies are actively managed and monitored. Nordea Kredit Realkreditaktieselskab's derivative exposures, potential collateral calls and their impact to LCR is closely monitored and managed.

Table 20 - EU LIQ2 - Net Stable Funding Ratio

The NSFR is defined as the amount of available stable funding (ASF) relative to the amount of required stable funding (RSF). All liabilities and capital instruments are assigned an ASF weight, while assets and certain off-balance sheet positions receive an RSF weight. The objective is to reduce funding risk over a longer time horizon by requiring banks to fund their activities with sufficiently stable sources of funding in order to mitigate the risk of funding stress. The NSFR was 1663% at the end of Q2 2026. It represents a 912 p.p increase compared to the previous quarter (752%), primarily driven by decrease of weighted lending and other assets, while stable funding remained broadly unchanged. The following tables set out the unweighted and weighted value of the NSFR components of the Nordea Kredit Realkreditatieselskab during 2026 (i.e. quarter-end observation).
