1. DIRECTORY SERVICES

The Site is intended to provide you with certain information from Issuers regarding the self-certification of their Products as labelled covered bonds. The requirements of the Covered Bond Label Convention are intended to increase transparency, improve investor access to information, and improve liquidity in covered bonds, but they are not a substitute in any way for each User's independent investment and credit evaluation.

The Product Information on this Site is provided for your convenience only, and does not constitute any form of credit rating, an offer to sell (or the solicitation of an offer to purchase) any Product, nor does it constitute a recommendation, or investment advice (or any other type of advice) upon which reliance should be placed.

Completion of the relevant self-certification automated process by the Issuer will lead to the grant of the Covered Bond Label. The grant of such label is entirely within the control of the relevant Issuer, and we do not independently verify whether such Issuer complies with the relevant criteria. The existence of a Covered Bond Label does not represent any opinion by us about the creditworthiness of a Product, the value or price of a Product, the appropriateness of a Product's terms, or the Product's future investment performance. Nothing contained on this Site is intended to predict or project future performance.

We make no representation that the Products which are featured on the Site are suitable for you and we disclaim all liability and responsibility arising from any reliance placed on any Product Information or on the Covered Bond Label by any visitor to the Site, or by anyone who may be informed of any of its contents.

The issuer believes that, at the time of its issuance and based on transparency data made publicly available by the issuer, these covered bands would satisfy the eligibility criteria for Article 129(7) of the Capital Requirements Regulation (EU) 648/2012. It should be noted, however, that

whether or not exposures in the form of covered bonds are eligible to preferential treatment under Regulation (EU) 648/2012 is ultimately a matter to be determined by a relevant investor institution and its relevant supervisory authority and the issuer does not accept any responsibility in this regard.

C. Harmonised Transparency Template - Glossary

The definitions below reflect the national specificities

Field Number Definition 1. Glossary - Standard Harmonised Items HG.1.1 OC Calculation: Actual Total value of cover pool subtracted nominal value of covered bonds HG.1.2 OC Calculation: Legal minimum Minimum legal required OC of RWA HG 1 3 OC Calculation: Committed ND2 Index Loans: These are loans where instalments and outstanding debt are adjusted with the development of an index which typically reflects trends in consumer prices. The loan type was introduced in Denmark in 1982. All Danish index loans have index semi-annual payment dates (January 1st and July 1st). Index Joans are offered as cash loans. The maturity depends on the Joan type. Especially the maturity for subsidized housing depends on the size of the future inflation rate. Fixed-rate loans: The long-term – typically 30-year – fixed-rate, callable loan is considered the most traditional mortgage loan. With this loan, the borrower knows in advance the fixed repayments throughout the term of the loan. The long-term fixed-rate mortgage loan has a prepayment option which may be exercised in two ways, i.e. the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may purchase the underlying bonds in the financial markets and deliver them to the mortgage bank. This loan type is also offered with interest-only periods. Adjustable Rate Mortgages: Adjustable-rate mortgages (ARMs) were introduced in 1996 and the main advantage of ARMs is that interest rates are generally lower than those of fixed-rate loans when raised. The interest rate is generally reset at a frequency of 1, 3, 5 or 10 years and the underlying bonds are replaced by new bonds. The yield of the new bonds determines the loan rate for the period until the next interest rate eset. The lower initial loan rate should therefore be weighed against the risk that it will increase during the loan term. An ARM may be prepaid at a price of 100 in connection with each interest rate reset. Alternatively, the borrower may prepay the loan by purchasing the bonds on market terms - as with all mortgage loans. This loan type is also offered with interest-only periods. Interest Rate Types Money market based loans: The loan rate changes at generally three or six months. In addition, this loan type differs from ARMs as this interest rate depends on a reference rate, ie an interest rate determined in another market. The reference rate of DKK-denominated loans is CIBOR (Copenhagen Interbank Offered Rate) or CITA (Copenhagen Interbank Tomorrow/Next Average), an interest rate which is quoted daily by NASDAQ. This loan type is also offered with interest-only periods Non Capped floaters: These are loans where the rate changes at generally three or six months. The reference rate of DKK-denominated loans is CIBOR (Copenhagen Interbank Offered Rate) or CITA (Copenhagen Interbank Tomorrow/Next Average), an interest rate which is quoted daily by OMX NASDAQ. Capped floaters: It is possible to get a loan with a floating interest rate which cannot exceed a certain level (cap). In this way, the borrower hedges against major interest rate increases. If a loan has a cap of 6%, then the interest rate can never be higher than 6%. The loan rate will track Cibor (or Euribor / Cita), as long as it does not exceed 6%. A floating-rate loan may be prepaid in two ways: either at an agreed price - typically 100 or 105 - or the borrower may buy the underlying bonds at market price. Other: Any other loan types, which not comply with the above mentioned. HG.1.4 Residual Life Buckets of Cover assets [i.e. how is the contractual and/or expected residual life defined? Residential versus commercial mortgages		
Description of the difference made between residential/owner occupied and commercial properties	The Danish FSA sets guidelines for the grouping of property in categories. Property type is determined by its primary use.	
Describe when you classify a property as commercial?	Property which primary purpose is owner occupation is characterised as residential. Whereas properties primarily used for commercial purposes are classified as commercial (cf. below). The Danish FSA sets guidelines for the grouping of property in categories. Examples of application of which classifies property as commercial are:	
	· Office	
E.g.: Private rental, Manufacturing and Manual Industries, Offices and Business Agriculture.	, · Retail/shop	
	 Warehouse Restaurants, inns etc. Hotels and resorts Congress and conference centres. Campsites. Traffic terminals, service stations, fire stations, auction and export houses. Agriculture Forestry Nurseries Ships 	
NPL (Non-performing loans)		
	A loan is categorised as non-performing when a borrower neglects a payment failing to pay instalments and / or interests.	3
Describe how you define NPLs	The NPL rate is calculated at different time periods after the original payment date. Standard in Table A is 90 day arrear.	
Explain how you distinguish between performing and nonperforming loans in the cove pool?	Commercial bank CB issuers adhere to the Basel definition of NPL. No distinction made. Asset substitution i not allowed for specialised mortgage r banks.	
	The Basel definition of NPL's is applied for commercial bank CB issuers Asset substitution i not allowed for specialised mortgage banks, hence NPLs are par	t
Are NPLs parts of eligible assets in cover pool? Are NPL parts of non eligible assets in cover pool?		
	For commercial bank CB issuers NPL's are eligible assets in the cover pool. Asset substitution i not allowed for specialised mortgage banks, hence loans in foreclosure are part of the cover pool.	
Are loans in foreclosure procedure part of eligible assets in cover pool?	For commercial bank CB issuers loans in foreclosure procedure are eligible assets in the cover pool.	
If NPL and/or loans in foreclosure procedure are part of the covered pool which provisions are made in respect of the value of these loans in the cover pool?	n The Danish FSA set rules for loss provisioning. In case of objective evidence of impairment provisioning for loss must be made.

Loan-to-Value (LTV)	Legal framework for valuation and LTV-calculation follow the rules of the Danish FSA - Bekendtgørelse nr. 687 af 20. juni 2007
	The publication contains two different ways to monitor LTV. One where loans are distributed continuously and one where they are distributed discretely. In both tables the fair value of the loans are distributed into predefined LTV bracket intervals. Table M4a/b4a and M4b/B4b displays the loans continuously. Table M4c/B4c and M4d/B4d displays the loans discretely.
Describe the method on which your LTN calculation is based	The continuous table(M4a/b4a and M4b/B4b) distributes the loans from the start Itv of the loan to the marginal Itv. This means that, if the loan is first rank, it is distributed proportionaly by bracket size from 0 to the marginal Itv into the predefined brackets. If the loans has prior liens, it is distributed from the marginal Itv of the prior liens to the marginal Itv of the loan under consideration.
	The discrete table (M4c/b4c and M4d/B4d) distributes the total fair value of each loan into a single itv bracket, according to the marginal itv of the loan under consideration. Average LTV is weighted by loan balance categorised by property type.
	Example 1a below shows a case where the loan is first rank and distributed continuously. Example 1b shows the case where the loans has prior liens and distributed continuously. Example 2 below shows the discrete distribution of a loan.

	Explanation Example of discrete ("Sidste krone") distribution into LTV brackets for a loan with LTV of 75 and a loan size of 1 million In this example the 1.000.000 is distributed into the 70-79.9 interval because the LTV of the total loan is 75

General explanation	General practice in Danish market The issuer can elaborate on the applied balance priciple.
Table G3	E.g. describe if stricter pratice is applied than required by law
	The general balance principle does not require a one-to-one balance between the
General balance principle	loan and the bonds issued. This gives the credit institution a wider scope for taking
	liquidity risk than the more strict specific balance principle.
	The specific balance principle ensures a one-to-one balance between loans and
	bonds issued, and is used for the issuance of SDRO, SDO and RO bonds.
