6. Macroeconomy

Nordic economic development

Firmer grounds

GDP

- Trade agreements between world leading economies have led to diminishing uncertainty and contributed to the global outlook standing on firmer grounds
- The Nordic economies have remained resilient amid global headwinds. Economic activity is picking up and will be positive going forward, according to our forecast
- The labour market is fundamentally strong in the Nordics. However, recent years' economic development has led to divided conditions between the countries

Public balance/debt, % of GDP, 2025E (IMF)

- The ECB is expected to leave its policy rate unchanged at 2.00% until year-end 2026. Thereafter, two rate hikes are expected during 2027, bringing the policy rate to 2.50%, according to Nordea's forecast
- The Riksbank is expected to leave its policy rate unchanged at 1.75% until year-end 2026. Thereafter, three rate hikes are expected during 2027, bringing the policy rate to 2.50%, according to Nordea's forecast
- Norges Bank is expected to leave its policy rate unchanged in 2026 and 2027 at 4.00%, according to Nordea's forecast
- Most of the Nordic countries are AAA-rated, characterised by robust public finances and solid external balance sheet surpluses

Households

Divided confidence

Household debt

- The elevated global uncertainty contributed to a weakening of consumer confidence at the start of the year
- The level has gradually improved in recent months, except for Danish consumers, but still indicates caution among Nordic households
- Household purchasing power and consumption are expected to improve as real disposable income continues to increase. The stronger domestic demand is expected to boost economic growth

Household savings

Private consumption

Housing markets

Gaining traction

Housing prices

Households' credit growth

- Housing price development in Norway and Denmark have fared better than their Nordic counterparts. Norwegian housing prices were up 5.5% year on year in September 2025. The development in Sweden and Finland remains sluggish and prices are still negative year on year
- Monetary policy has become less restrictive in most of the Nordic countries. In addition, improved financial conditions for households should support a continued recovery in housing prices
- Transaction volumes have normalised. However, the higher-than-normal supply of homes suggests the market can absorb higher demand without sharp price increases
- Household credit growth has turned positive in all the Nordic countries except Finland
